

Fire chief report 12/7-1/12/16

12/30. Dispatch toned fire department out for tree on power line. Pumper #2 responded to the end of sunny slope road to find the power line "archin" from the tree on the lines. Lapointe police department agreed to scene management until Excell Energy responded in a surprisingly timely manner.

1/6/16 training involved working with our new hose lay deployment system. Hose lay training. Hose lay packing and storage. Great training for the new members and the other oracles. Also Gary Krupsack put together a trailer pump procedure guide line placard. We went over this with the crew and will follow up with a trailer pump specific training.

1/9 ice rescue training. We gathered all our rescue suits and some human being personnel to put in them to check for leaks. We busted up some ice in the marina, checking all the suits, practiced rescue techniques, trained in the open water. February brings a ice rescue refreshing course with instructors from Wisconsin Indian head technical college (witc)

2015 was fairly quiet. ..let's try and repeat this in 2016

Happy new year from Lapointe fire /rescue
