Fire chief report 1/6-2/8

No calls

2/3 monthly training was a large check list of things we needed to get done.

#1. We completed our blood borne pathogens safety course.

#2 trained on the new f.l.i.r. (forward looking infrared) this device is a monocular that can pick up heat signatures for amazing distances. We purchased this as a ice rescue tool but after training with it we decided it's for sure an all around rescue tool...

#3 some local carpenter's built an awesome prop for the fire/rescue to train for bailing out of windows and down ladders. ..when the fire's behind you and your ass is catching. ...this was great training. ..see attachment

#4. Emergency vehicle dale is being fitted with an fuel injection system as to maintain its reliability until it's scheduled replacement that is at an undetermined year at this point...we have removed the important rescue gear and placed it in vehicles to get it where it needs to go in and emergency. Dale will be out of service for roughly a week 2/8-2/16

#5 Ice rescue personal have recertified their c.p.r. training.

Don't risk the questionable ice.

Be safe...Lapointe fire/rescue
